

SILTFENCE

By Cosio Industries Ltd

Cosio Siltfence is a permeable, high strength woven silt control fabric. Siltfence is used to prevent run-off water and sediment from discharging into stormwater systems and waterways.

Installation guidelines

Cosio Siltfence can be attached to warratahs, Y-posts or a site boundary fence using cosio clips and low tensile wire. The bottom edge of the silt fabric should be buried into the ground according to council guidelines. Typically a channel of 100mm wide x 200mm deep should be dug and the silt fabric should be back filled by earth moving equipment. Y-posts should be driven into the ground with a minimum depth of 400mm. Y-posts should be spaced at an approx distance of 2m. Attach a support wire using 2.5mm galvanised wire.

Super Silt-fence is also available on request, Super Silt-fence is 1.3m high and is specially manufactured from high strength material. Please ask our sales team for information.

Technical specs

- Size - 860mm wide x 50m long
- Average weight 90 gm/M2
- Colour - Green
- Permeability 30l/m2/sec
- Tensile strength 20 KN/M
- Code - SILT86050

Applications

- Earth moving sites
- Drainage outlets
- Earth mound stock piles
- Boundary protection

Steel Y posts available, please ask our sales team.
