

FROSTGUARD

Frost protection fabric

Frostguard is a lightweight, spunbonded frost protection fabric. Lay over crops & plants to help prevent frost damage.

Create a microclimate around your plants and crops by using the unique insulating properties of Frostguard. Frostguard can enhance plant growth during the winter months by trapping warmth under the fabric. Growers have reported temperature increases up to 6 degrees when used as a plant or cloche cover. Frostguard can be pinned to the ground using cosio steel staples or plastic pins. In row applications, the edge of the fabric can be buried in earth to help prevent wind lift.

Applications

- Can be layed directly over crops & plants
- Use over cloche hoops
- Can be used as decoration material
- Can help to prevent damage from frosts

Advantages

- Economical
- UV stabilised
- Light weight
- Lets air & water permeate

Technical specs

- Roll size - 2m x 10m, 1m x 1000m, 2m x 100m, 2m x 1000m
- Material - Spunbonded PP, 20 & 30gsm
- Colour - White
- Life expectancy - 1 season

Frostguard can be layed directly over plants, but should not be left in direct contact during sunny or hot days.
