

AQUALINER PVC

Flexible PVC Pondliner

Aqualiner PVC is a heavy duty lining membrane suitable for fish ponds, irrigation storage, artificial wetlands and other water storage applications.

Aqualiner PVC is a premium quality lining membrane and can be used in a range of lining applications. Aqualiner PVC is extremely flexible and easily conforms to excavations.

Aqualiner is cost effective and is available in either 0.5mm or 1.00mm thickness.

An underliner such as Bidim non-woven geotextile should be used to protect the liner against rocks, sticks or sharp subgrade.

PVC like all geomembranes can shrink over time when exposed to sunlight. Please add 5-10% to your dimensions to allow for membrane shrinkage. Install the liner with the excess liner in the pond as wrinkles, these will reduce within the first 12 months.

Applications

- Fish ponds
- Water storage
- Artificial wetlands
- Natural swimming pool
- Heavy duty waterproof cover

Technical specs 0.5mm

- Roll width - 2m, 3.9m, 5.8m
- Roll length - 25m, cut to length
- Colour - Black
- Warranty - 5 years UV degradation pro-rata

Technical specs 1.0mm

- Roll width - 7.75m, 11.6m, 15.5m, 19.2m
- Roll length - 50m, cut to length
- Pre-fabricated panel 27m x 40m
- Colour - Black
- Warranty - 10 years UV degradation pro-rata
